

Garage shelving

Utilized floor particleboard as shelving, finished off the ends and rough edges. Using 12 inch shelf brackets for support, that were painted white to match the walls. The shelves were given a double coating of white semi gloss paint for durable finish. This was a convenient way to store my tools and supplies, and be able to find everything I just looking on the shelf. I had relocated the various existing hooks for my convenience and the way I wanted the garage laid out.
